Dataset Introduction

The **MHB-2425 Reference Tables – England Inpatients dataset** is a healthcare dataset that contains information about **mental health inpatient admissions and service activity in England**. It provides statistical data on patients who were in contact with mental health services, inpatient admissions, demographic breakdowns, and service-related indicators.

Key information available in the dataset:

- **Total number of people in contact** with mental health services
- **Number of people admitted as inpatients**
- **Number of people not admitted**
- **Demographic breakdowns** such as:
 - Age groups
 - Gender
 - Ethnicity
 - Region
- **Service activity and healthcare performance indicators**

Total people in contact: 4,129,290

- **Number of people not admitted:** 259,141

This dataset helps analyze **mental health service utilization, patient admission patterns, and healthcare trends across England**.

Technologies Used

1. Microsoft Power BI

Power BI is used to create an **interactive dashboard** and visualize healthcare data.

Features used:

- KPI Cards
- Bar Charts
- Trend Charts
- Dashboard Pages

2. Microsoft Excel Dataset

Used as the source file:

File: MHB-2425-Reference Tables-England-Inpatients.xlsx

Excel is used for:

- Data storage
- Importing into Power BI
- Data cleaning source

Dashboard Visuals Used

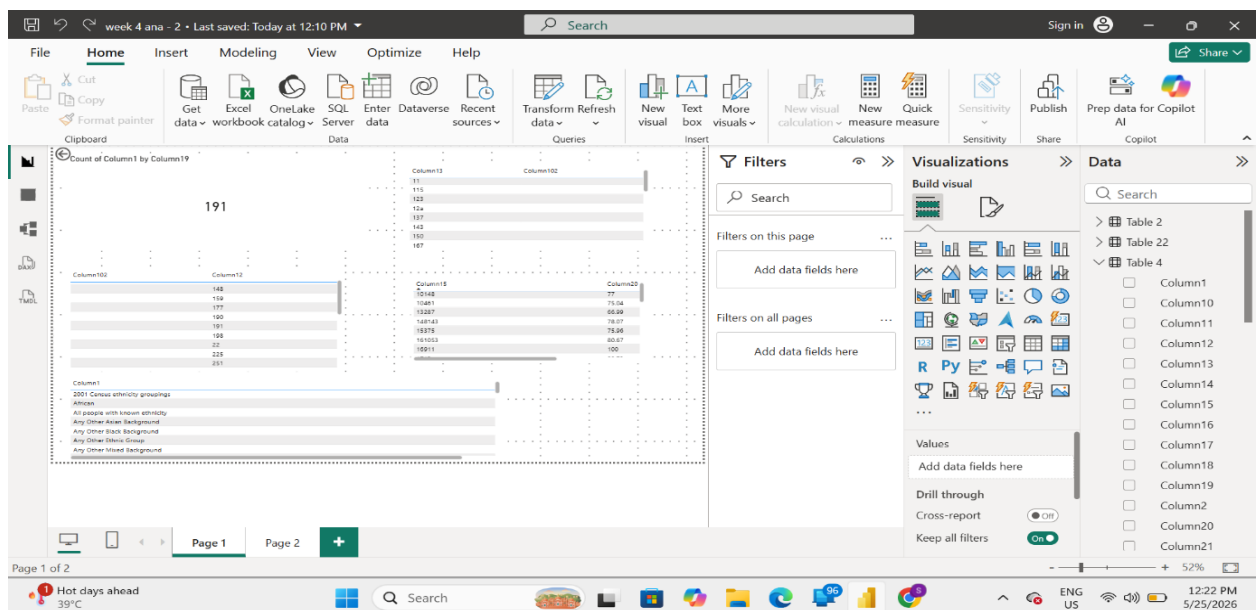

Page 1

KPI Cards

- Total Patients in Contact
- Inpatient Admissions
- Non-Admitted Patients
- Admission Percentage
- Service Utilization %

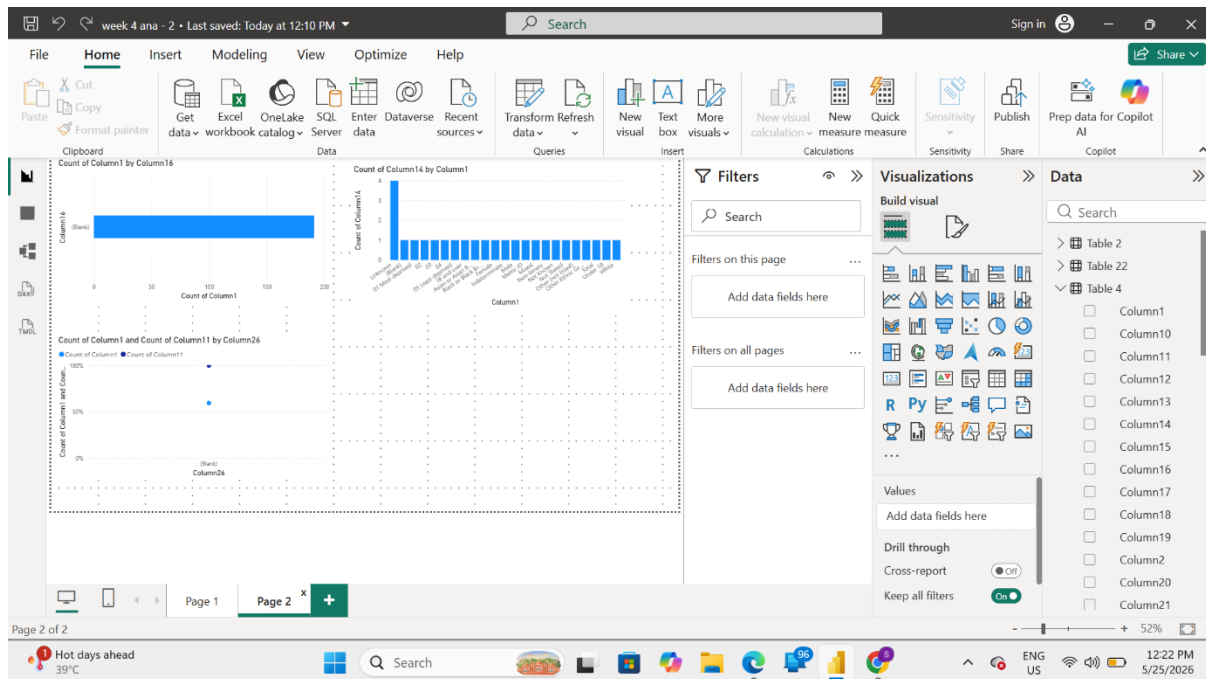

Tables

- Demographic breakdown tables
- Ethnicity / Age group summaries

Charts

- Bar chart showing patient count by category
- Column chart comparing demographic groups
- Scatter plot for relationship analysis

Conclusion

The **England Inpatients mental health dataset** provides valuable insights into inpatient mental health service usage across England. Using **Power BI**, the raw Excel reference tables were transformed into an interactive dashboard with KPI cards, tables, and charts.

Key outcomes:

- Identified total patient contact numbers
- Compared admitted vs non-admitted patients
- Analyzed demographic trends
- Created visual dashboards for decision-making
- Improved understanding of mental health service performance

Overall, **Power BI** made the healthcare dataset easier to analyze and interpret through **visual reporting**, helping users understand patient admission trends and service activity efficiently.
